MI Solar Works

MI Solar Works is a Srinergy lead statewide initiative to solarize 6,000 Michigan homes and businesses by 2014 as part of the Department of Energy's "Race to the Rooftops" national challenge. Working with local partners, we have brought down the cost of solar so that the system pays for itself. Zero down financing is based on credit approval. In addition, homeowners and businesses can take advantage of 30% federal tax credits on the total cost of the solar system. These solar systems are designed, engineered and assembled in Michigan.
